

Disinfecting: what you should pay attention to

Cleaning only

When you clean a surface, you clean hygienically, which reduces the amount of dirt before disinfection. However, it is not disinfected yet.

**Clean first,
then disinfect**

Disinfecting only

If you disinfect but don't clean, you leave dirt behind to which germs can attach. It is important to remove the dirt before you start disinfecting.

What disinfectants are there?

Alcohol based

- ✓ Usable for hand disinfection and small surfaces
- ✗ Creates alcohol fumes and a fire hazard on surfaces larger than 0.5 m²
- ✗ Misuse of alcohol gel with additives will leave an organic layer behind that creates a growth base for microorganisms

Peroxide based

- ✓ Environmentally friendly
- ✓ Works fast and versatile
- ✓ Works against viruses
- ✗ Scent
- ✗ Less stable at temperatures above 40 degrees

Quaternary ammonium based

- ✓ Usable at a wide range of temperatures
- ✓ Kills a large variety of microorganisms
- ✗ Creates foam
- ✗ Leaves a hard to remove residue, that creates a growth base for microorganisms
- ✗ Slow working

Chlorine based

- ✓ Cheap
- ✓ Multi-faceted working
- ✗ Doesn't work with the wrong PH value
- ✗ Creates toxic chlorine fumes when combined with hot water

YES The product has a CTGB authorization with legal claims for use against viruses.

Does your product have a CTGB authorization with legal claims for use against viruses?

NO The product doesn't have a CTGB authorization with legal claims for use against viruses.

Tevan Panox® 300
